

GRASSCLOTH WALLCOVERINGS CARE RECOMMENDATIONS

Natural wallcoverings

Wallcoverings made from natural grass, paper and mixed fibers is subject to extremely delicate dry cleaning. Wallpaper from natural materials is cleaned of dust by napkin made of polypropylene, viscose and other easily sliding materials, first run along the fibers, and then across.

Once a year, such wallpaper can even be vacuumed, but the power should be set to the minimum, and the nozzle should be used as usual (without additional brushes).

If you purchased SUPREME coverings using the moisture repellent impregnation service, wet cleaning is possible using a cloth or soft brush without strong friction.
